7. Bioactivity

Biological target:

Product data sheet

An alkaloid with diverse biological activities.

In vitro activity

Brucine inhibited the inflammation, cell proliferation and promoted rate of apoptotic cell death and reduced the mitochondrial potential, which is evidenced by respective (AO/EB, Rh-123, and PI) staining.

In vivo activity

Brucine, the main alkaloid bioactive compound from *Strychnos nux-vomica* seeds, offers unique compatibility advantages in inflammatory diseases associated clinical practices. Thus, the present investigation was projected to explore the activity of brucine towards MI provoked by isoprenaline hydrochloride (ISO) in rats. The cardioprotective properties of brucine were evaluated via detecting the infarct size, serum cardiac marker enzymes (CK, CK-MB, cTnT, and cTnI), endogenous antioxidants (CAT, SOD, GPx), and lipid peroxidation (TBARS and LOOH), inflammatory mediators (NF- κ B, TNF- α and IL-6) and histopathological analysis. Brucine's cardioprotective effect might be associated with TNF- α , IL-6 signaling molecules activation, revealing its pharmacological actions.
